2007

2011

2024

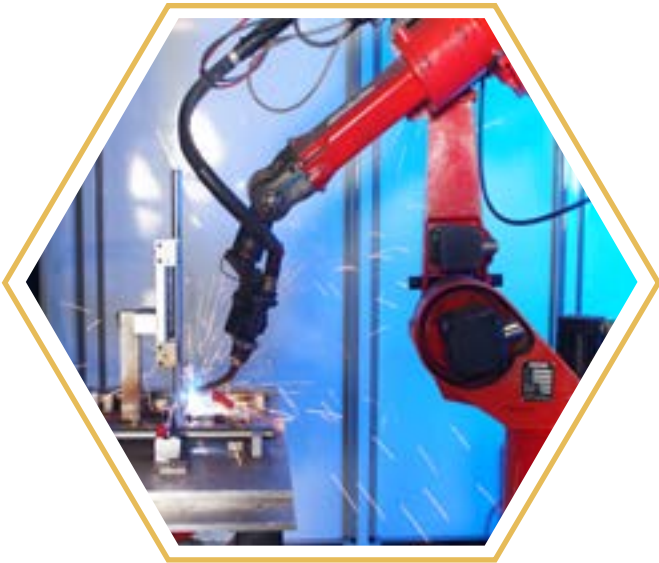

Continuation of the family tradition with Georg Jahn as CEO.

DEUTSCHE Handmade
in Germany
MANUFAKTUREN

Recognition as a German Manufacturer.

Our Manufacture

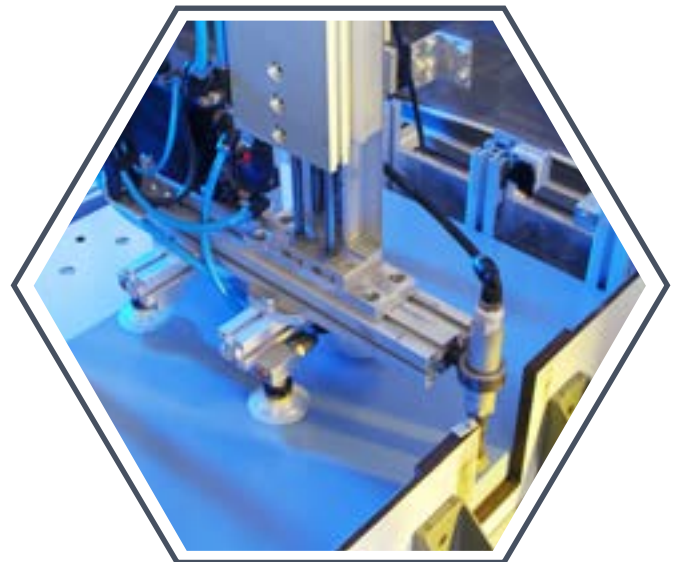

Metal Production

In our metal production department, state-of-the-art laser cutting systems and automatic saws are used to create precise aluminium and steel sheet cuts, as well as custom-fitted cuts of steel and aluminium profiles. In addition, welding tasks – partly supported by robots – is carried out with the highest precision. A wide range of punching, drilling, and bending machines is available for further metal processing.

Elastic / Film Production

With modern machinery, we are able to weld and shape a variety of plastics. This enables us to produce visualisation and planning accessories that complement our classic shopfloor and planning boards, as well as products for office organisation. The resulting broad product range makes us the ideal partner to fulfil your requirements with our holistic solutions.

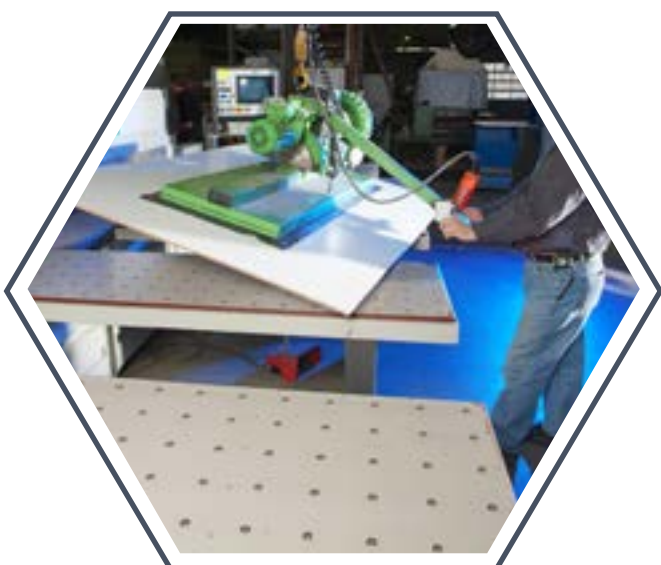

Paper / Film Cutting Production

In our paper production department, we manufacture printed materials of all kinds using sustainable resources, especially recycled paper. In addition to our classic planning and organisational media, this includes index cards, forms, and other accessories, as well as labelling elements for our whiteboards. We also print on plastics using the screen printing process. Furthermore, both offset and digital printing are used to create customised print solutions.

Powder Coating

Our powder coating process ensures a clean finish without visible transitions. By baking the coating, we achieve an extremely adherent and durable surface. The colours are vibrant and long-lasting – available in either matte or glossy finishes. This guarantees not only an attractive appearance but also the highest level of protection and quality.

Wood Production

In our wood production department, various materials are processed using state-of-the-art CNC machines and skilled manual craftsmanship. Decades of experience ensure the highest quality – whether for series production or custom-made pieces. From conference furniture to shopfloor boards, pinboards, or workshop planners – we offer tailored solutions to meet your needs.

Final Assembly

In final assembly, quality takes top priority. Here, every product receives its finishing touches before leaving our facility. Cleanliness and attention to detail are paramount to ensure that each customer receives a flawless product. Through rigorous inspections and strict quality standards, we guarantee that every detail is perfectly executed.

Refining and Shipping Products

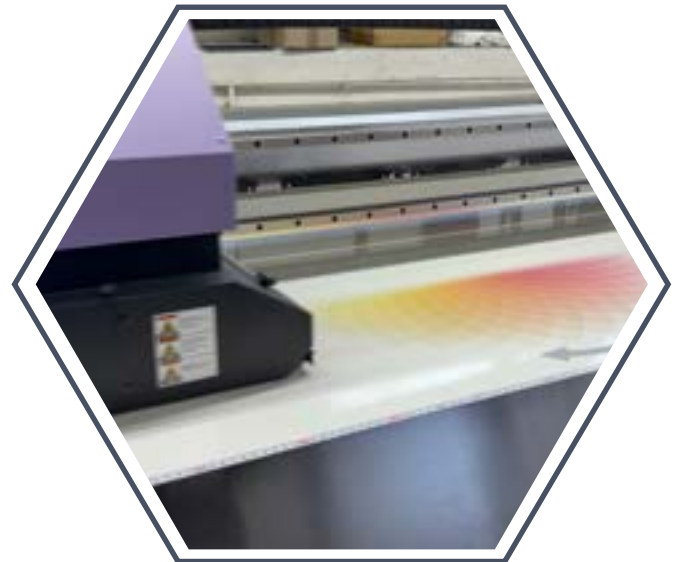

Sublimation Printing

In sublimation printing, heat is used to infuse the colour directly into the material – creating an exceptionally durable and abrasion-resistant surface. Since no raised surface is produced, the result remains smooth, making it easy to write on and wipe off again. Perfect for a wide range of applications!

UV Direct Digital Printing

Using state-of-the-art digital printing technology, we print not only on paper, but also on fabrics, metal sheets, and plastics – customised to meet individual customer requirements. Whether for whiteboards, presentation boards, or magnets – we implement corporate designs with precision and apply photos, logos, or slogans to the surfaces. By selectively printing tables, scales, or grids, we provide greater clarity and structure, perfectly tailored to the intended use.

Packaging & Shipping

To ensure our products arrive in perfect condition and without damage, we place great importance on careful packaging. Depending on the requirements, we use customised packaging solutions that offer optimal protection. Our shipping is reliable and on schedule, ensuring that goods reach their destination on time. Whether individual items or larger shipments – we guarantee safe transport and professional handling.

We Love Custom Solutions

We create individual product solutions tailored to your specific requirements.

Our in-house product development allows us to develop samples and prototypes. After the prototype phase, production can move seamlessly into series manufacturing.

Thanks to our extensive methodological expertise and decades of experience, we are the ideal partner to deliver prototypes and samples that go exceed your expectations.

You define the requirements – we deliver the tailored solution.

References

Flying Office – The Office on the Meadow

A converted cargo bike that serves as a flexible mobile workspace: equipped with four desk workstations, lounge sofas, a beverage bar, and three square meters of whiteboard space.

An integrated internet hotspot and a power bank ensure connectivity and power supply on the go.

Seating Landscape for Modern Learning

A custom-designed seating landscape for the school centre – from construction and production to installation. The seating arrangement meets the highest standards for fire safety, load capacity, and overall safety.

New CIP System in Corporate Design for a Logistics Company

Shopfloor meeting point with mobile whiteboards featuring digitally printed designs tailored to the customer's specifications. The base plates were powder-coated to match the customer's corporate identity. From concept to development, production, and on-site installation – all completed within just a month.

Planning Board with Planning Magnets

For a client in the food sector, we created a customised planning board with planning magnets and a sublimated corporate design applied directly to the whiteboard. This solution enables efficient scheduling and deployment of facility management operations.

From Prototype to Series – The Mobile Room Divider

We developed a flexible room divider available in various versions. Whether with a whiteboard or chalk surface, acoustic panels, or as a shelving unit – it adapts individually to the needs of its users.

Frameless Whiteboard with Relief

We had the opportunity to create a frameless whiteboard with a custom-designed silhouette for our client. A custom-shaped whiteboard made to measure. We make it possible!

Why Choose Us?

For over 100 years, we have stood for quality, experience, and customised solutions.

German Manufacturer

We combine craftsmanship with cutting-edge technology to deliver tailored solutions – from single pieces to series production.

Experience & Expertise

Over a century of market presence means in-depth know-how and continuous development.

Highest Quality Standards

Our products meet the highest standards of quality, reliability, and durability.

Your Benefit

Take advantage of personalised consulting, customised solutions, and long-lasting products.
